

MOBILE APP PROJECT PROPOSAL

DreamMind

Smart Sleep Wellness App

A unified mobile solution for sleep tracking, smart alarms, analytics, and AI-powered coaching.

Team: Xalilov Abdukarim · Tohirov Hikmatillo · Choriyeu Mirjalol · Bo'taboyev Sherzod

The Sleep Problem No One Has Solved Simply

😓 The Problem

Fragmented App Ecosystem

Users rely on 3–5 separate apps for sleep tracking, alarms, and wellness advice — with no single unified experience.

Broken Routine Consistency

Fragmented tools disrupt habit building and make it hard to maintain a consistent, healthy sleep routine.

Overwhelmed Users

Students and young professionals need simple, unified guidance — not complex, disjointed interfaces.

✨ The Opportunity

Clear Market Gap

No single calm, well-designed app currently combines all sleep needs in one place — the gap is real and addressable.

Underserved Audience

Students and young professionals represent a large, growing segment actively seeking smarter sleep solutions.

Design-First Differentiation

A calm, premium, beautifully designed app experience can win loyalty in a market full of cluttered, uninspiring tools.

DreamMind — One App for Everything Sleep

Five powerful features unified into one calm, beautifully designed mobile experience.

Sleep Logging

Track sleep behavior and quality daily to build a clear picture of your patterns over time.

Smart Alarm

Plan and optimize wake-up routines intelligently based on your sleep data and goals.

AI Coach

Personalized sleep recommendations and guidance powered by intelligent AI analysis.

Analytics Dashboard

Turn sleep data into understandable trends and actionable insights at a glance.

Onboarding Flow

A calm and guided entry experience that eases users into their sleep wellness journey.

Built on a Modern, Scalable Android Stack

Tech Stack

Language

Kotlin — modern, concise, and fully expressive for Android development.

UI Framework

Jetpack Compose + Material 3 for a fluid, component-driven, beautiful interface.

Architecture

MVVM with ViewModels and StateFlow for clean, reactive, and maintainable state management.

Networking

Retrofit + OkHttp for efficient, reliable API communication.

Storage

DataStore Preferences for lightweight, modern local data persistence.

Architecture Flow

A clean unidirectional data flow ensures predictable state, easy debugging, and a smooth, responsive user experience across all DreamMind features.

What's Next for DreamMind

Phase 1 — Done

Core app built: authentication, dashboard, sleep log, smart alarm, analytics, AI coach, and user profile — fully functional.

Phase 2 — Next

Backend expansion, offline support, and improved AI coaching personalization for a richer, more adaptive experience.

Phase 3 — Future

Wearable device integration, sensor-based sleep recommendations, and richer multi-source analytics.

Closing Statement

DreamMind proves that product thinking, design quality, and clean mobile architecture can come together in one student-built app.
