

Assignment #2: Final Group Project Presentation

In-Class Presentation Date: Tuesday, 5th May 2026

Deadline to Upload on EduPlus: 10th May 2026

(Final presentation slides, GitHub project link must be submitted, Short technical report (5–8 pages))

Instructions for Mobile App Development Final Presentation and Project Demo

1. Presentation Overview

- Each group will present their mobile application project during class on **Tuesday, 5th May 2026**.
- The presentation should last around **10 minutes**, followed by a **3-minute Q&A session**.
- This is your opportunity to showcase your mobile app to peers and instructors.
- The presentation should include:
 - Problem identification and project inspiration
 - Application goals and core functionalities
 - Technologies and development tools used (e.g., Kotlin, Jetpack Compose, Firebase, etc.)
 - Application architecture and component structure
 - Key features and UI/UX design
 - Challenges encountered and how you addressed them
 - Future improvements and scalability
 - Summary and closing remarks

2. Preparation

- Make sure each member is familiar with the technical and design aspects of the app.
- Prepare a **clear, visually engaging slide deck**, including:
 - **Introduction:** Group member names and brief context
 - **Project Motivation:** Purpose and target audience
 - **Development Tools:** IDEs, libraries, APIs, and frameworks used
 - **Architecture Overview:** MVVM pattern, navigation flow, key components
 - **Design Highlights:** Screenshots of main UI elements and user flows
 - **Development Timeline:** Milestones achieved during the project
 - **Future Work:** Planned enhancements or features

- **Conclusion**

3. Live App Demo

- Showcase the functionality of your mobile application through a live demo.
- Make sure the app runs smoothly (either on an emulator or a physical device).
- Demonstrate core features and user interaction flow clearly.
- Practice transitions between slides and demo segments in advance.

4. Q&A Session

- Be ready to answer questions about:
 - Technical decisions (e.g., choice of architecture, libraries)
 - User experience and interface design
 - Potential use cases and real-world applications
 - Future scalability and feature development

5. Technical Report (5–8 Pages)

- Each group must submit a **concise technical report (5–8 pages)** describing their project.
The report should include:

1. Introduction

- Problem statement
- Motivation and objectives

2. System Overview

- Description of the application
- Key features
- Target users

3. Architecture and Design

- Application architecture (e.g., MVVM)
- Component structure
- Navigation flow (diagram encouraged)

4. Implementation Highlights

- Key technical aspects such as:
 - State management
 - API integration
 - Database usage
- Important design or coding decisions

5. Challenges and Solutions

- Technical difficulties encountered
- How they were resolved

6. Conclusion and Future Work

- Summary of the project
- Possible improvements and extensions

Note:

- Focus on **clarity and technical explanation**, not length
- Avoid unnecessary content
- Include diagrams where helpful

6. Submission Requirements

- Submit your final **presentation slides** and a **link to your GitHub repository** on EduPlus.
- Ensure the GitHub repository is:
 - Public or shared with instructor access
 - Contains a properly documented README (explaining installation, usage, and features)
 - Organized with well-named folders and clear code structure
- **Submission Deadline:** 10th May 2026 (11:59 PM)

*****Good Luck*****
